VRA Core 3.0

EXAMPLES

The following examples were created to demonstrate how the *VRA Core Categories 3.0* might be implemented. Variations in data content (and the way the data is entered) are intentional in order to illustrate variation in practice. Some of the examples include the use of the Core for local administrative metadata (e.g., digital images made from slides). We include these to illustrate how the Core might be used to describe various derivatives. Please Note: these examples were created by the Data Standards Committee and do not represent the cataloging work of any institution.

Example 4

The following data sets describe a temporary piece of architecture erected for the entry of Emperor Charles V into Nuremburg on Feb. 16, 1541. The arch incorporates elements from

the Arch of Titus in Rome and from Serlio's Libro d'architecttura. It was removed after the occasion, packed away, and was modified for reuse later for the triumphal entry of Emperor Matthias. Eventually it disappeared. Our primary pictorial knowledge about this arch is contained in a broadsheet--a woodcut by Peter Flotner and in a preliminary drawing attributed to Georg Pencz, who was at that time the official city-painter of Nuremberg.
